HIGH-RISK HIRING: INFORMATION ASYMMETRY IN DOMESTIC HELPER MARKET

Presented by:

Alan, Shaurya, Ming, Rhea, Dicky

PROBLEM IDENTIFICATION ::::

>>> High-Risk Hiring in Domestic Helper Market

**Over-reliance on Agency-provided CVs
and Brief Interviews**

Exaggerated or Hidden Abilities

Lack of Verification on the Claims

PROBLEM IDENTIFICATION

>>> Possible Causes

Information Asymmetry

-
-
- **Domestic helpers:**
- Hold the real knowledge about the
- helper's true skills, work attitude, and
- past performance
-
-
- **Hiring Families:** Left in dark and rely
- on potentially exaggerated CVs

Fragmented Data

-
-
- **Information Silos:**
- Past experiences are trapped in silos
-
-
-
-
- **Hard to Verify:** Information
- available for families are from
- word-of-mouth experiences or CV

PROBLEM IDENTIFICATION

>>> Possible Causes

Price Opacity

-
- **Unpredictable True Cost:** Employers have to pay for insurance, flight and medical examinations
-
-
-
-
- **Negotiation Blindness:** It is hard to negotiate when helpers' true skill is hidden

High Search Cost

-
- **Time Consuming Vetting:** Employers have to communicate with multiple helpers and dealing with interviews and the CVs
-
-
-
-
- **High Financial Cost:** It take time for employer to acknowledge the true value of a helper.

DIGITAL TOOL & DATA ENGINE :::

>>> How can the Initial Features Solve the Pain Points

Misleading Resumes

- Agencies often provide generic CVs
- Hide real skills differences

SOLVED BY

Helper Profile Search

- Enable browsing verified profiles by employers
- Faster and more accurate matches

Unreliable Feedback

- Vague comments are invaluable for hiring
- Hard for FDHs to improve their work

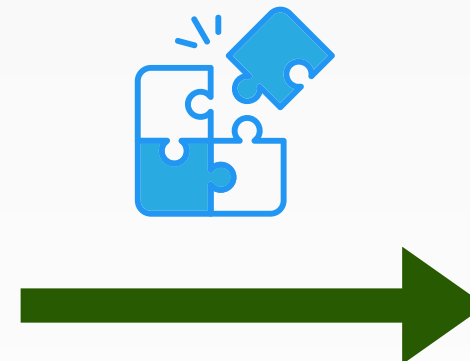

Authentic Feedback Channel

- Enable leaving verified comments in multiple aspects
- Enhance transparency in the hiring process

Skilled Helpers Overlooked

- Written CVs cannot reflect real abilities
- FDHs lack opportunity to demonstrate their competence

Helper Skills Preview

- FDHs can upload short demo videos
- Increase skill visibility and fairness

DIGITAL TOOL & DATA ENGINE ::::

>>> Mature Core Features

1

> Family Fit Score

- Matching scores based on family needs
- Newborn care, elderly care, daily chores
- Helpers' strengths and personality align with employers' expectations

2

> Best Helper Recommendations

- Combine ratings, overall performance, experience to select top helpers
- Save time without browsing endlessly

3

> Smart Search Filters

- Enable filtering by nationality, years of experience and languages
- Their skills and strengths become searchable and visible

4

> Foreign Domestic Helper side Features

- They can view their average scores and category ratings
- Receive constructive feedback for improvements

DIGITAL TOOL & DATA ENGINE

>>> Data Network Effort

1

More genuine post-hiring review

Richer database with accurate ratings

2

More data & text feedback

More accurate Family Fit Scores

3

More accurate recommendations

Higher trust towards the platform

4

More employers join the platform

More FDHs build and update profiles

>>> Data Collection

HelperConnect

— Trusted Helpers, Real Reviews —

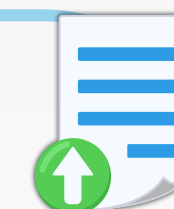

Primary Method: Crowdsourcing

- Post-hiring reviews after **3 months**
- **Mandatory review link** sent to employers to reduce review biases

Supporting Methods

- FDHs manually **upload videos** and documents
- Integrate with Immigration Department **public records**

Cold-start Strategy

- Encourage past employers to write seed reviews
- All reviews are clearly marked **Verified Purchase**

SEQUENTIAL ONBOARDING ::::

>>> Targeting High Pain Point Users- Phase 1 of 4

WHO

Families in Hong Kong actively hiring foreign domestic helpers, facing a broken, opaque hiring process

Pain Point

Agencies provides generic CVs that hide real skill differences. A bad hire costs HK\$15-30, extremely high urgency

Value for them

- Real past-employer reviews to reduce hiring risk
- Free premium access for 3 months in exchange for send reviews

Value Exchnage: Employers gives ratings to get trust & transparency

SEQUENTIAL ONBOARDING ::

>>> Expanding-onboarding Secondary Groups

WHO

Foreign Domestic
Helpers (FDHs) looking
for better-matched
employers and portable
reputation

Incentives to Join

- Build a verified reputation that transfers across employers
- Upload skill demo videos, be discovered by higher-paying families
- View own ratings & receive constructive feedback
- Demand signal already visible employers are actively searching

Value to Existing Users (Employers)

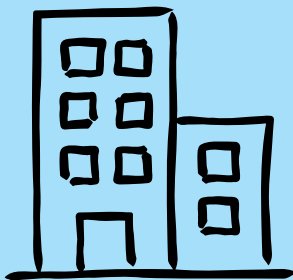

- Employers can now browse real verified profiles, app transforms from a review tool into a live matching engine
- Helper profiles bring their own work history data, improving Family Fit Score accuracy for all employers
- Direct hiring becomes possible, bypassing agency fees

Value Exchange: Employers attract helpers through direct demand and disintermediation, matching becomes possible for the first time.

SEQUENTIAL ONBOARDING ::

Adding Verification Partners

WHO

Professional verification partners that conduct background and compliance screening for helpers.

Incentives to Join

- Access high-volume employers and helpers
- Generate steady verification requests
- Become the preferred trust partner on the platform

Value to Existing Users

- Employers gain professional verification and compliance assurance
- Helpers receive credible third-party endorsement that boosts credibility
- Platform builds stronger trust and network effects competitors cannot replicate

Value Exchange: Verified helpers and professional oversight reduce hiring risks and deepen trust for all users.

SEQUENTIAL ONBOARDING ::

>>> Completing the Full Network Effect

WHO

Insurance providers, medical check clinics, training centers, all serve the helper hiring lifecycle

Incentives to Join

- Precise customer acquisition employers who just hired are 3× more likely to need insurance & medical checks within 30 days.
- Access to verified, high-intent users at the exact moment of hire
- Near-zero marginal cost channel vs. traditional advertising
- CPA/CPL model: pay only for results

Value to Existing Users

- Platform becomes a full end-to-end hiring solution, zero reason to leave, deepening lock-in for all prior groups
- More service providers enrich platform data and strengthen network effects
- More service providers join → switching costs rise → moat deepens for everyone

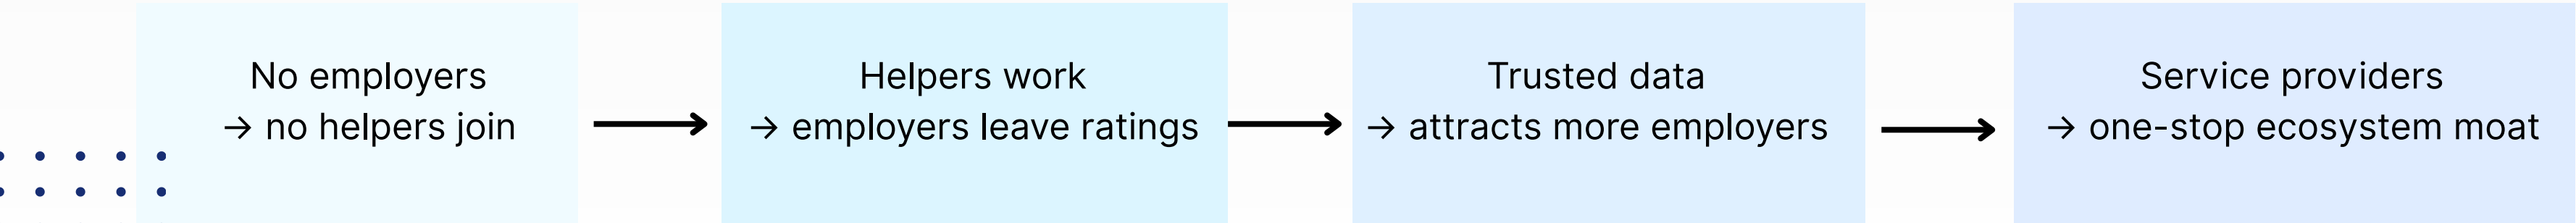

Value Exchange: More service providers join → platform becomes one-stop shop → switching costs rise for all groups → moat is complete.

SEQUENTIAL ONBOARDING ::::

>>> Sequential Logic & Growth Flywheel

Group	What they give to the Platform?	What they get back?	Flywheel Effect
Employers	Ratings & Reviews (Data)	Transparency & Trust	Reviews become searchable database
Helpers	Verified Skills & Work History	Career Growth & Higher Pay	Employers now browse profits, matching possible
Verification Partners	Background check & compliance data	Access to high-volume users	Significantly higher platform trust
Service Providers	Essential Add-on services	Targeted Customers	One-stop ecosystem, full lock for all groups

Value Exchange: Each new group makes the previous group's experience better. The sequence cannot be shortcut, that is precisely what makes it defensible.

SEQUENTIAL ONBOARDING ::::

>>> Why order matters more than speed

Phase 1

HK employers

- Browse profiles, submit seed reviews of past helpers.
- Immediate utility: single-player value even before network exists.

Pain: HK\$15–30K bad hire cost drives high urgency

Phase 2

Foreign domestic helpers

- Build verified profiles, upload skill videos, view own ratings.
- Join because employers are already searching demand signal visible.

Gain: Portable reputation asset owned for life, transferable across employers

Phase 3

Verification Partners

- List verified helpers, integrate background & compliance screening
- Join because verified helpers significantly increase placement success rates

Effect: Professional oversight deepens platform trust

Phase 4

Service providers

- Insurance, training, medical checks at point of hire.
- Join for precise access to verified, high-intent users.

Effect: One-stop ecosystem deepens lock-in for all prior groups

"No employer reviews → no helpers. No employers + helpers. Each new group makes the previous group's experience better. The sequence cannot be shortcut, and that is precisely what makes it defensible."

SEQUENTIAL SYNTHESIS

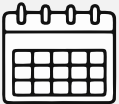

>>> Sequential Logic & Growth Flywheel

Component	What It Does	Strategic Role	Competitive Advantage
Problem	Exposes info asymmetry in a 400K+ FDH market with zero verified reputation infrastructure	Creates undeniable, high-pain demand	Bad hire costs HK\$15–30K users are highly motivated from day one
Data Engine	Converts each hire into structured, multi-dimensional review data across 5 skill categories	Turns usage into intelligence	Proprietary labeled dataset impossible to replicate without years of real transactions
Onboarding	Sequences supply before demand; each side unlocks and validates the next	Solves cold-start without overspending on acquisition	Self-reinforcing network by Phase 3 no competitor can shortcut the sequence
•Revenue	4 streams activated progressively as trust and data mature across the platform	Captures value at every interaction layer	Revenue mix shifts toward recurring (subscription-led) → higher valuation multiple

REVENUE MODEL

4 Streams to Profitability

Streams	Who Pays	Why They Pay	Pricing	Scalibility
Premium Family Subscription	Hiring Families	Unlimited Fit Scores, background checks, priority support	HK\$98/mo	HIGH · Recurring
Transaction Fee	Hiring families	Verified match reduces fall-through & rehire cost	5-8% per hire	HIGH · Volume-linked
Helper Pro Tier	Helpers	Priority placement, skill badges, video boost	HK\$38/month	MEDIUM · Recurring
Partner Ads & Insurance	3rd Parties	Targeted CPA/CPL access to verified users	Variable CPA/CPL	HIGH · Margin-rich

Recurring Revenue Engine

+70%

Target 70%+ recurring mix by Month 12 → investor grade predictability & premium valuation multiples

Data-Driven Pricing Power

+15%

Scarcity tiering by skill category → expanding gross margins; CAC ↓ via review virality

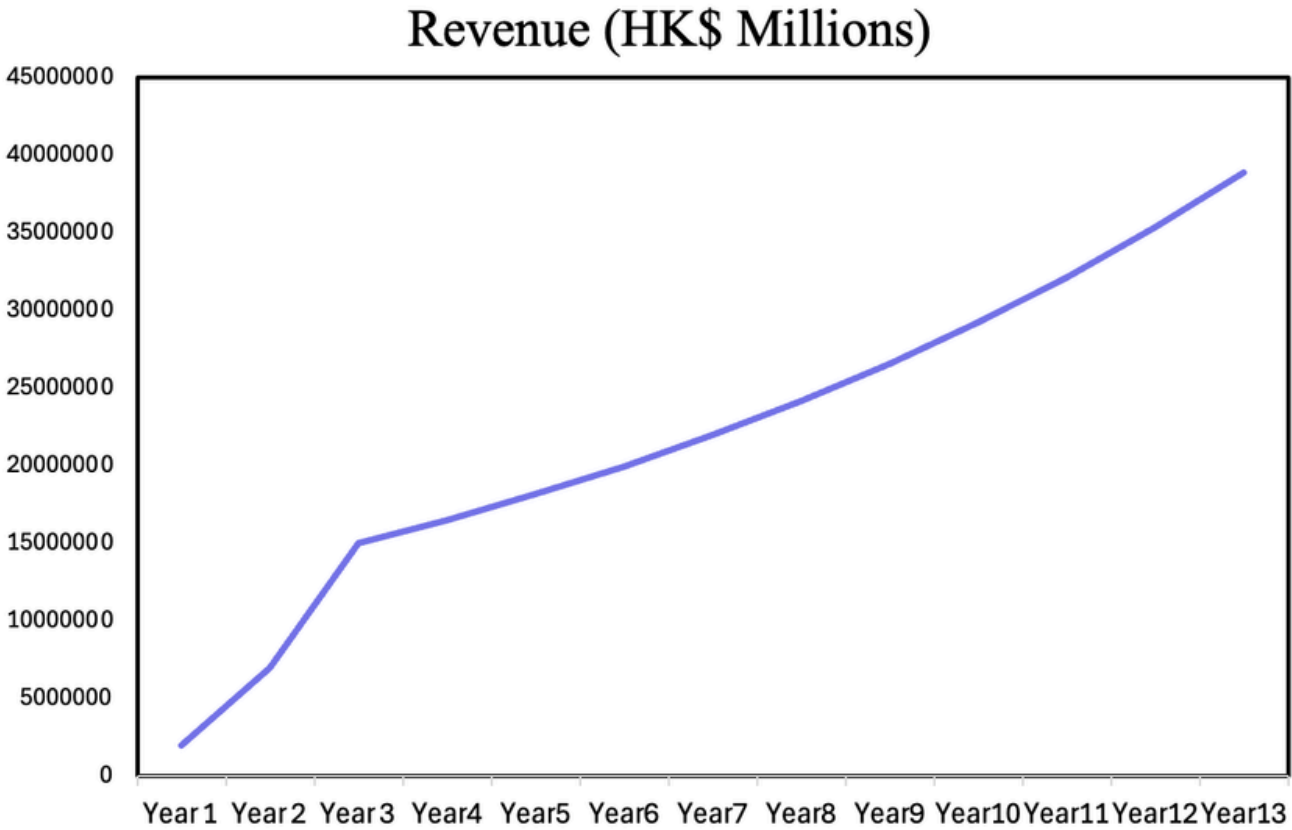

REVENUE MODEL

Financial Projections & Unit Economics

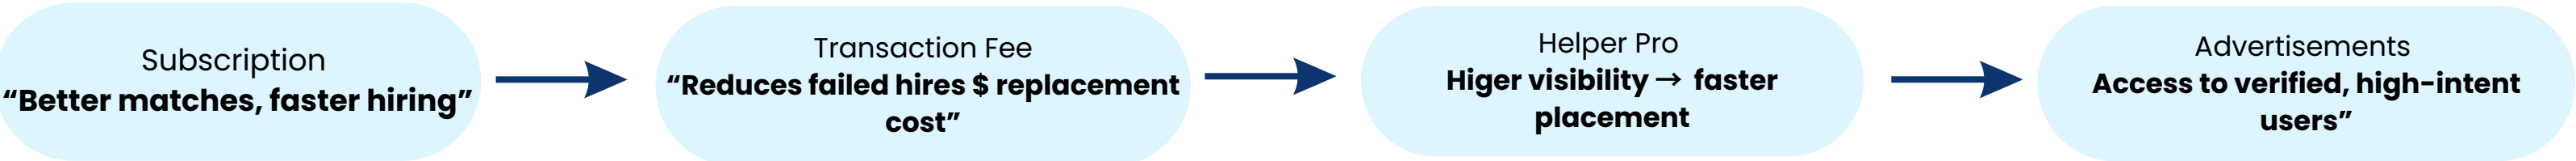

- Monetization is aligned with value creation users pay as trust and match quality improve.
- Assumptions: Growth driven by network effects; CAC declines via referrals; growth normalizes to approx 10% post-Year 3

Metric	Year 1	Year 2	Year 3
Users	5,000	15,000	35,000
Paid Conversion	10%	15%	20%
Revenue(HKD Million)	2,000,000	7,000,000	15,000,000
CAC (HKD)	\$120 per user	\$100 per user	\$80 per user
LTV (HKD)	400	650	900

Key Insights:

- 174% CAGR (Y1–Y3) driven by network effects
- LTV/CAC improves from 3.3x → 11.25x (strong unit economics)
- Revenue mix shifts toward recurring streams (subscription-led)

REVENUE MODEL ::

Financial Projections & Unit Economics

Lever 1: Pricing Power

- Freemium → Premium conversion unlocked when Family Fit Score proves value after first hire
- Helpers pay for Pro tier as verified reputation translates to higher wages

- Average HK family rehires every 2 years → platform captures re-engagement via review prompts and contract.
- Helper career progression (salary raises, renegotiations) keeps both sides active between hires
- Target: >60% Year 2 return rate, each return generates transaction fee with near-zero CAC

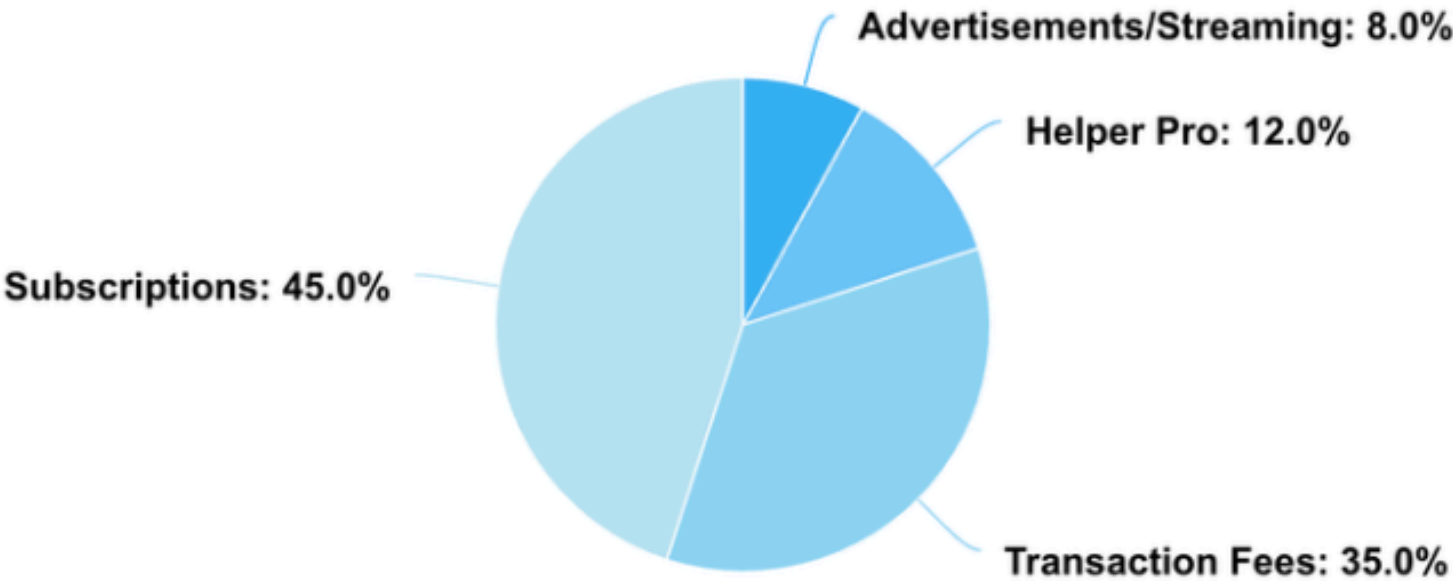

Lever 2: Frequency & Repeat Usage

Lever 3: Ecosystem Upsell (3rd Party)

- Insurance, medical checks, and training providers pay CPA/CPL fees to reach verified, high-intent users at the exact moment of hire
- This revenue stream has near-zero marginal cost, platform earns without additional user acquisition
- Projected to represent 8% of Year 3 revenue mix, growing as platform data becomes more targetable

Revenue Mix Data

Source: Projections based on case assumptions and platform economics framework.

Stream	Year 1	Year 3	Why It Shifts
Subscriptions	30%	45%	Recurring base grows as trust accumulates
Transaction Fees	50%	35%	Volume grows but becomes smaller share
Helper Pro Tier	10%	12%	Helpers invest in reputation as wages improve
Partner Ads/Insurance	10%	8%	High margin but smaller scale early

Insight line: "By Year 3, 57% of revenue is recurring, the profile of a platform business, not a marketplace."

CONCLUSION ::

HelperConnect

— Trusted Helpers, Real Reviews —

➤➤➤ The Defensible Moat: Why We Win | "Data is the product. Trust is the moat. Scale is the prize."

Compounding Match Accuracy

Data Network Effects

- Every hire + review sharpens Fit Score model
- Accuracy improves with scale
- Proprietary labeled dataset

Unit Economics Advantage

Profitable Growth Engine

- LTV/CAC expands as trust improves
- Repeat usage lowers acquisition cost
- Revenue per user increases over time
- Target: LTV/CAC > 5x by Year 3

Asset-Light, Replicable

Platform Scalability

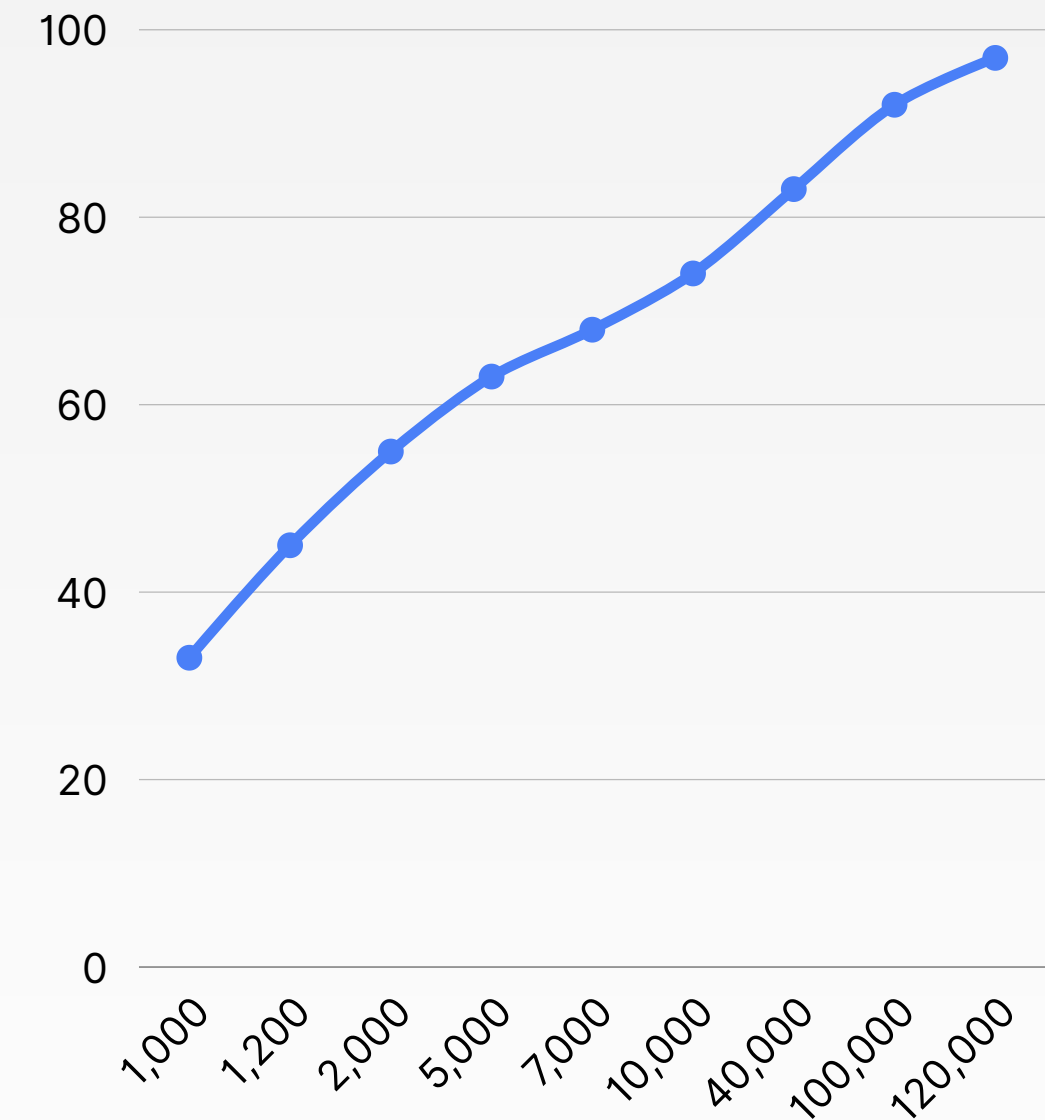

- Zero marginal cost of matching
- Playbook portable to SG/TW/MY
- Modular compliance + APIs
- Higher conversion from better matching

Stickiness on Both Sides

Trust & Switching Costs

- Families: hiring history locked in
- Helpers: portable reputation score
- Multi-hire relationships deepen lock-in

From Problem to Moat: The Full Value Chain

PROBLEM

- Information Asymmetry

DATA ENGINE

- Reviews + Video + Fit Score

ONBOARDING

- Sequential, Supply-First

REVENUE

- 4 Diversified Streams

MOAT

- Self-Reinforcing Flywheel

THANK YOU
